

I want to thank BC Construction Company for their help in managing the process of constructing a suitable space for Nice Ice STL. Early on when the city inspectors identified necessary improvements Chris Haase was engaged and involved in getting the clarification needed to ensure we could pass the inspections. He even took time to help evaluate other possible spaces to ensure my path forward was a good decision.

BC Construction's contacts and network of skilled subcontractors made it easy for me to leave the project in their capable hands. Matt Ule, project manager, kept me updated throughout the several week renovation and Mike, lead supervisor was on site and able to answer any questions.

We passed the inspections and I was able to get my manufacturing license in less then 3 months. I appreciate BC Construction for their hard work, great communication and organized handling of the project.

Thank you,
